

## Munching Caterpillar

River & Rowing  
Museum  
Henley on Thames

Caterpillars are young butterflies or moths that eat plants. They spend the first part of their lives eating as much as possible to get ready to grow their wings.

1. Colour in the caterpillar and the leaf and cut them out.
2. Fold the leaf along the dotted line.
3. Starting from the folded edge, cut the leaf across the grey lines.
4. Unfold the leaf.
5. Weave the caterpillar through the slots in the leaf.
